DATE: May 28, 2020

SUBJECT: Installation of door access lock, remote entry control, video and audio of people requesting entry into the County County Clerk's Office. This is the same system that is installed in the County Treasurer's Office.

SCOPE OF WORK: Install a door strike and intercom control with audio and video, so that the Clerk's deputies can grant access to individuals into the office. The system has a camera with microphone so that they can see people wishing to gain entry and converse with them before access is granted. An SD card can be added to record video and audio conversations if desired. Install keypad on the outside of door for after hours and normal employee entry.

1. Install Hands Free AiPhone Two-Way Door Intercom System with door release control. This system also can see people standing at the door from the desk console. It has two way audio and records entry activity.
2. Mount electronic strike to lock and unlock door remotely from the desk.
3. Install keypad on the outside of the door, so that authorized personnel can gain entrance without a key.
4. Run wiring to and mount master station at the first deputy's desk.

The cost of this project would be \$1,703.00 in material and \$950.00 in labor for a total of \$2,653.00.

Up to two additional sub-stations can be installed at other deputy's desk for an additional cost of \$645,00 per sub-station and labor to install it. The sub-station has the same functions and capabilities as the master station.

Supply a one-year parts and labor warranty on the installed equipment. All warranties exclude lightning, power surges, brown outs, other acts of God, and customer/employee abuse or neglect.

Thank you for the opportunity to bid on this improvement to your facility.
