Freight Fee	Rate	
-------------	------	--

Standard Freight	\$ 205.00	Tracking information emailed when the order ships. The order ships 4-6 weeks after the order is finalized.
Rush Order – Flag Drop	\$ 89.00	This option shortens the shipping timeline to 2-3 weeks.
Liftgate	\$ 95.00	Liftgate is required when the delivery address does not have a loading dock or forklift.

Appointment	\$ 60.00	Required if call needed in advance of delivery. This option enables the customer to request a specific time and date
Inside Delivery	\$ 65.00	Required if assistance is needed or provided to move the order indoors *** If an inside delivery option is not chosen prior to shipment and fee accrues upon a delivery (i.e. the driver helps you move the box indoors) an invoice may be issued to the customer for the inside delivery fee

Limited access (Residential delivery, etc.) *** The most effective means of avoiding the limited access fee is selecting a delivery address with a loading dock ***If a limited access option is not chosen prior to shipment and the fee accrues during the delivery, an invoice may be issued to the customer for the limited access fee	\$ 75.00	Limited Access fees are often assessed in, but are not limited to, the following two situations: 1. 53" semi-trailer cannot be accommodated at the delivery address 2. There is a gated checkpoint the driver must pass through prior to making the delivery
---	----------	--

ON-CONCRETE INSTALLATION INSTRUCTIONS

Now that you have inspected your cabinet for damage, and subsequently signed for the delivery, it is time to install the cabinet for service.

Included Hardware:

(4) stainless steel wedge anchors

Tools Needed:

- 1/2" concrete (or appropriate) drill bit
- Hammer
- Hammer Drill
- 3/4" wrench or socket

Step 1:

Place your cabinet on a level (+/- 2 degrees) concrete or stone surface where you ultimately want it to sit. You will want to place your cabinet in an area where there is enough clearance on the right side to open the door a full 180 degrees.

Trace the outer diameter of the (4x) 5/8" holes in the bottom of the cabinet. Once marked, move the cabinet aside.

Step 2:

With an appropriate drill bit, drill (4x) 1/2-inch diameter holes, 4 inches deep, at the center the center of each mark. Do your best to ensure the holes are drilled straight.

Once the holes are drilled, clear any debris and realign the cabinet with the holes.

Step 3:

Ensure the washer is on the bolt, and the nut is threaded near the top of each anchor bolt (to protect the threads of the bolt).

Insert the (4) stainless steel wedge anchors supplied in the (4) holes and tap them in with a hammer.

Step 4:

Tighten each nut with a wrench to fully secure the cabinet.

Care Instructions:

- If your cabinet has a stainless steel finish, clean monthly with an oil based stainless steel cleaner.
- If your cabinet has a powder coat finish, clean monthly with warm mild soap detergent and rinse well with water.
 - Use powdered graphite or lock lubricant to smooth lock operation.
